

Environmental Management System Scope Statement

The Environmental Management System (EMS) applies to all activities, tasks, and infrastructure to deliver raw water supply and protect the environment which Murrumbidgee Irrigation (MI) has management and control over. This includes all on site activities including our field locations, Leeton, Griffith offices and depots.

The EMS does not apply to “principal contractors” who are conducting works under this arrangement. However, the process of engagement of principal contractors and monitoring of performance is covered by EMS. The EMS scope was made in consideration of our legal obligations, internal factors, external factors and needs of other interested parties where MI has control or influence.
