

Environmental Policy Statement

Our vision recognises the importance of irrigation to the region and the nation, and our responsibilities as a water delivery infrastructure operator to our customers and the community.

We are committed to operating the business through using sound natural resource management practices to leverage our system and regional advantages to provide the best quality products and value adding services to our customers.

We recognise the risks and impacts of our business activities and strive to minimise adverse environmental outcomes. To achieve this we are committed to:

- Complying with our environmental regulatory obligations
- Operating our water delivery & drainage systems to maximise water efficiency
- Reduce our greenhouse gas emissions and improve our business carbon footprint
- Using our EMS to continually improve, enhance and drive environmental performance
- Minimising waste generation and the prevention of pollution
- Managing pest species, including weeds in partnership with landholders
- Optimising stakeholder partnerships to build a sustainable future for the region

Our commitment is demonstrated by clear and measurable targets, which are described in our environmental strategy, and our achievements will be monitored and reported.
